

18.3.2020

$$w = \sum_{i=1}^n \alpha_i \cdot x_i$$

$$\phi \mapsto w_\phi = \sum_{i=1}^n \alpha_i \phi(x_i)$$

Predictions:

$$h(x) = \text{sign}(w^\top x)$$

$$\begin{aligned} \phi &\mapsto \text{sign}(w_\phi^\top \phi(x)) \\ &= \text{sign}\left(\sum_{i=1}^n \alpha_i \underbrace{\phi(x_i)^\top \phi(x)}_{k(x_i, x)}\right) \end{aligned}$$

$$h(x) = \text{sign}\left(\sum_{i=1}^n \alpha_i k(x_i, x)\right)$$

$$\text{Sps: } f(w) = \max_{(x, b) \in S} (w^\top x + b)$$

$$\nabla_w f(w) = x_w^*, \text{ where}$$

$$x_w^* \in \text{argmax}_{(x, b) \in S} (w^\top x + b)$$

$$x = \{(x, b) \in S \text{ for some } b\}$$
